

CQR: Diagrams

Definition of diagram

A diagram is a plan, sketch, drawing, or outline designed to explain or demonstrate how something works or to clarify the relationship of the parts of a whole.

Guidelines

The following guidelines are for making diagrams.

- Make diagrams big enough to allow actual measurements and comments to be written alongside appropriate parts of the depicted evidence.
- Colored and graphite pencils or colored ink may be used to make the diagram (this is the only exception to note keeping in ink).

NOTE: Information encoded in examination records by the use of colored and graphite pencils or colored inks may be compromised when the document is copied.
