

EVC: Overview

Introduction

7.4.1

The laboratory maintains an evidence control system to ensure and record the evidentiary value and integrity of all evidence stored and examined in the laboratory.

Section-specific information

Evidence handling information and requirements specific to each technical section are located in the individual procedures manuals.

Data entry guidelines

Case management data entry procedures or processes given in this manual are *general guidelines only*. Flexibility in the entry of data is allowed according to the nature of the evidence and the requested analysis as long as the integrity and value of the evidence is maintained through an accurate chain of custody.
